

YOU MUST SAY 'JARVIS' BEFORE ANY COMMAND

MISC NOTES

If you use anything with 'napalm' try replacing napalm with 'flame' it usually works better. So like 'flame strike' or 'flame barrage' rather than 'napalm strike' or 'napalm barrage'

There are multiple possible words/phrases for different commands, some work better than others.

TERMINAL ARROW DETECTION AND INPUT:

1. Say 'Jarvis code' as you are running towards the terminal
 - a. you should hear something like "ready sir"
2. Activate the terminal and when the startup/animation ends, say "now"
 - a. Note that sometimes it doesn't pick up "now" and you might need to say it again or a little clearer
 - b. Also note that it looks at the middle of your screen so it might take some playing around with for you to always get the arrows in view
 - c. May not work for super long inputs

STRATAGEM JAMMER BYPASS:

IMPORTANT (SET YOUR HUD BACKGROUND OPACITY TO HIGH IN SETTINGS)

1. Say 'Jarvis jammer' and you should get an audio reply confirming Jarvis is in jammer mode
2. Try one of your stratagems and it should open the menu in the upper left and enter the combo
 - a. Note sometimes it doesn't get it in time before it switches or if there is a really bright flash in the upper left corner it might fail

STRATAGEM COMMAND NOTES

EAGLE SUPPORT:

1. Some don't have 'eagle' in the name (five hundred instead of eagle five hundred)
 - a. I use 'eagle smoke' to differentiate from 'orbital smoke'

ORBITAL SUPPORT:

1. I usually say orbital before the name
 - a. Railcannon and airburst DO NOT have orbital at the beginning (idk why)

SUPPORT WEAPONS:

1. EAT – I usually say 'eat' but 'e' 'a' 't' should also work
2. Recoiless rifle – I usually say 'recoiless'
3. Arc grenade launcher is 'arc launcher'
